▪ **VRE outbreak on A4 declared over**

No new cases of Vancomycin Resistant Enterococcus (VRE) have been identified from two consecutive prevalence screens (swabbing all patients on the unit) on Dec. 5 and Dec. 12. The VRE outbreak on A4 has been declared over.

As always, visitors are asked to fully comply with appropriate hand hygiene and infection prevention and control practices when visiting the hospital; it is mandatory and vital to reducing health care associated infections.
